BlueView Expands Deepwater Sonar Capability

Seattle, Washington, March 25, 2011 – BlueView Technologies, the world leader in compact acoustic imaging and measurement technology, expanded the operating capability of its popular P-Series Deepwater 2D Imaging Sonar. The P900-90-D and P900-130-D now deliver unmatched real-time data and imagery at depths down to 4,000 meters (13,123 ft.). The expanded depth rating ensures compatibility with most work-class ROV systems deployed offshore.

“Our Offshore Deepwater Imaging Sonar are the most compact deepwater systems available, and the improved depth rating is in direct response to customer requests” said Jason Seawall, BlueView COO. Seawall added, “We continually seek ways to improve our systems to ensure that we deliver effective solutions that meet the unique challenges of our customers.”

BlueView is the leader in 2D imaging and 3D scanning sonar technology with more than 500 installed systems worldwide. BlueView Technologies’ advanced sonar systems are currently deployed on AUVs, ROVs, surface vessels, fixed positions, and portable tripods, and have been adopted by leading manufacturers and service providers to support mission critical operations. BlueView customers enjoy a low cost of ownership with reliable operation, exceptional service, in-person training, extensive online information, and worldwide after-sale support.

ABOUT BLUEVIEW TECHNOLOGIES

BlueView Technologies, Inc. provides state-of-the-art compact acoustic imaging and measurement solutions for navy, energy, civil engineering, transportation and port security applications worldwide. Visit www.blueview.com.
