#### **BlueView's DP900-90 takes multibeam imaging to new depths**

Seattle, WA - BlueView Technologies, Inc., the leading provider of miniature multibeam imaging sonar, has launched a new 4000 meter rated version of its proven acoustic underwater vision systems. The introduction of BlueView's first deep system is a direct response to requests from the Oil & Gas industry for a BlueView sonar that can provide underwater vision solutions for deep operations.

In addition to the new depth rating, the DP900-90 has a 90 degree imaging field of view, twice that of systems currently available. The significantly larger field-of-view provides ROV operators with a dramatic improvement in low visibility navigation and operations. The system is available with either an Impulse MSSJ or a Schilling SeaNet connector, making integration onto most work-class ROVs a quick operation. As with all of BlueView's products, the DP900-90 is small enough to mount with the ROV's main camera system, providing ROV operators with seamless low visibility operation capabilities.

#### **About BlueView Technologies**

Located in Seattle Washington, BlueView Technologies, Inc. manufactures both 2D and 3D miniature multibeam sonar solutions. BlueView delivers mission-critical, real-time underwater vision for Navy, Coast Guard, Law Enforcement, and Oil & Gas applications.
